

GRIFFON — PGE5 ROADMAP

August 2026 — February 2027

Goal: deliver a stable beta with a third plugin, automated plugin execution, easier plugin creation, and a stronger community ecosystem.

1. Main objectives

Third plugin
TOML usability
Scheduler
Community
Stable beta

Develop and integrate one new security plugin with GUI, tests, documentation and a demo use case.
Optimize the actual process of TOML usage to make it easier to use for new users.
Allow users to run plugin functions automatically at a chosen time or recurrence.
Make contribution easier with tutorials, beginner issues and public updates.
Harden the daemon, ABI, IPC, packaging and documentation before the final release.

2. Timeline

Period	Focus	Main deliverables	Done when
Aug 2026	Scope & architecture	Select third plugin; define scheduler; identify TOML pain points ; prioritize backlog	Scope and technical choices approved
Sep–Oct 2026	TOML onboarding	Simplified templates; complete examples; generator prototype; third-plugin POC	A new developer can configure and load a basic plugin manifest
Nov–Dec 2026	Core integration	Complete third plugin; build scheduler backend; persist tasks; integrate daemon	Scheduled execution works without GUI
Jan 2027	GUI & ecosystem	Scheduler GUI; plugin creation workflow; contributor docs; public contribution call	A user can create, install and schedule a plugin
Feb 2027	Validation & release	Beta tests; security and performance checks; package tests; final demo and release	Installable beta delivered with no blocking issue

3. Final scope

Must have

- One additional production-ready plugin
- Scheduler backend and GUI
- Persistent schedules and execution history
- Plugin generator or wizard MVP
- Manifest validation and clear error messages
- Complete installation and plugin-development documentation
- Final .deb and .rpm packages

Nice to have

- Automatic form generation for common parameter types
- Plugin UI preview
- First curated plugin catalogue or index
- Checksums or signatures for plugin packages

Out of scope for PGE5

- Full public marketplace
- Complete sandboxing of native plugins
- GUI generation for every possible plugin workflow
- Support for every Linux distribution
